## Part 1: News and Infos (screenshots DK2OM)

### 1. Italian pirate on 28001.5 kHz on SSTV

I found an Italian pirate on 28001.5 kHz transmitting on SSTV – Martin 1. His ident and exact location were mentioned. Details: Ident 1FS059 – date: Dec. 3<sup>rd</sup> – time: 1808 UTC – coordinates: on the top of the picture (North-East Italy) – Screenshot: Wavecom W-Code

### 2. What happens in the Regions 2 and 3?

#### Region 2 – South America - reported by XQ6FOD - Manfred

A while ago I was showing ham radio to a visitor, and while tuning through the bands, frankly we heard more intruders than hams. Fishermen on 14100 USB, more fishermen on 18100 USB, fishermen on the lower part of 40m (in USB too) - really the ham bands sound like marine bands these days. The ones I heard on 14100 had a Peruvian accent, those on 18100 sounded more Central American. Those I hear on 40m are mainly from my own country. While showing him digimodes, we found lots of QRM from OTHR, ionosounders, etc, disrupting reception. And the lower 330kHz of 10 meters is of course firmly in the grip of Brazilian CBers now. Hams already have lost that part of that band, for all practical purposes.

The ham bands aren't any longer what they used to...

#### Region 3 – Australia – experiences, comments and proposals from VK5EEE - Lou

I'm not surprised to hear this about Latin American region. My antennas seem to favour that area but I almost never (at least on CW) hear any active radio hams there. I think it could be useful to report findings from around the world about the general state of QRM on our bands, and what could be done short, medium, long term to forecast and reverse these trends. In our area our 40m CW band is useless in the evenings due to strong SSB QRM every 5kHz USB and LSB -- which thus covers the entire CW band -- from powerful Indonesian pirates. These pirates also seem to occupy a great many frequencies between 10000 and 11400kHz – there are huge number of them in a population of 200 million.

#### **THAILAND A GOOD EXAMPLE**

But we can contrast Indonesia to Thailand where there are a total of ZERO pirates on HF. In HS-land you cannot buy any gear without showing license. You cannot import either without inspection. And you cannot operate in any location without a location license in addition to your operating license, and this system clearly works, no matter it is a bit slow to get a ham license.

This even though the HF population of HS amateurs is quite small, perhaps 200 or less, while the VHF population of HS amateurs is high, a quarter million or so. The radio amateur license density per population in Thailand is at a rough guess 10 times what it is in Australia.

#### **CW BAND PRIME TARGET FOR PIRATES**

For CW operators, the problem is pirates which almost invariably use SSB, of course use the CW band, because there, they hear no other SSB. They don't use the SSB parts of the band because then they would be afraid when they hear a strong local SSB radio amateur telling them off, or even direction finding them potentially. So some CW operators, myself included, have gravitated to the SSB part of the band, which after all is shared CW-SSB it's fine for CW, and due to radio amateur inactivity, it is also often empty.

Right now, 20m and 17m are open -- and yet tuning the entire bands from top to bottom and bottom to top

several times, I did not hear ONE radio amateur signal on CW nor SSB, nor Data.

## NATIONAL SOCIETY FAILURE

During the week day, and remember a great many hams are retired, I can more often than not tune the entire 40m band also without hearing any SSB, Data, nor CW. And this even though the now manifestly corrupt national society seeks in a misguided effort to make amateur radio a public CB social media extension, they have not succeeded. They have taken the view that amateur radio is in decline and the way to reverse that is to make it easier to get a license at least at lowest level (which still gives 100W, though officially 10W, to anyone sitting a short course without possibility of failure, and then access to 80m, 40m, 15m, 10m) and yet the vast majority of these don't get on air since amateur radio offers little to them compared to internet social media.

## REASONS FOR EMPTY HAM BANDS IN AUSTRALIA

So, why is there little activity on the ham bands in Australia, whether MF, HF, VHF, EHF etc? It is not just the low population density in the 1970s the bands were FULL of activity.

It is due to these factors:

Retirement villages and homes do not allow antennas. Just when hams should start enjoying their hobby they are relegated to sitting in front of FOX TV. XYLs dominate the OMs and do not allow their slaves to do anything without their permission, constantly demand their presence in exchange to stay slave. Those who are not retired see now benefit in amateur radio over social media, since the wow-factor and joy-factor of CW is not known to them. Restrictions of antennas even for those who live "free" in this underpopulated wide open space: nothing higher than 10m without expensive permission.

High noise levels on HF frequencies with imports never checked for compliance and authorities and national society careless about this problem. On the weekends they tune around and find nothing but button pushing "5NN" boring things, no chats or QSO, and conclude real amateur radio is dead

There are zero activities involving youth because to do so requires all sorts of licenses and insurance, youth are isolated in social media bubble from elders

## FORECAST FOR AUSTRALIA

The trend will continue for contest and automatic (not even frequent button pushing, only "on and off switch") as well as "DX 5NN TU" activities will increase, as there are still people who with no other way to get meaningful awards on their walls, are chasing wall paper. This in turn reinforces the frustration about the lack of REAL amateur radio (which at its most basic element includes an honest and meaningful signal report, to measure the home brew antenna if not transmitter and receiver), and the mantra that "without this activity there'd be no activity" while ignoring the massive collateral damage these \*unrestricted\* activities produce in combination with the above mentioned factors given as reason for empty ham bands in Australia.

Digital CW will continue to make faster uptake levels than Human CW because of the "quick fix" mentality of obtaining any level of results with minimal effort, thus driving CW onto other bands as DCW will continue to invade the exclusive CW bands rather than stick to the shared CW-Data bands.

SSB will continue to decline because there is almost no advantage and several disadvantages over speaking into a microphone on amateur radio bands compared to a mobile app on Internet.

Digital modes (including DCW as it develops further) will also become more "switch on, turn off volume, and leave switched on forever" where WSPR, JT etc will expand in use and 99% of digital operations will be automatic, without operator intervention, the operator only looking at the PC once a day or week to see what "QSO" he managed to achieve with QRP and without any care about inefficient antenna, high local noise level, lack of human activity, lack of equality with XYL, etc.

## FUTURE RISK OF VACATING AMATEUR BANDS TO "FREE BANDING"

Amateur Radio as a whole, in the future, may undergo a major change as authorities become less caring about HF spectrum other than as a resource to be sold off. If the next section "how to reverse the trend" is not observed, amateur radio bands will be taken over by pirates as in Indonesia and Latin America, to be shared with non-amateur amateurs, i.e. button pushing, volume down, automated stations. Those who wish to EXPERIMENT and COMMUNICATE at human level may be forced off the amateur bands and onto new self-found bands just as the "Free Banders" have done, taking advantage of quiet broadcast bands (Australia has now also vacated the broadcast bands as of January 2017) and former Marine bands, Fixed Service bands, etc. This seems to be inevitable because the availability of amateur radio equipment without license and carelessness of authorities makes it easy for pirates to operate such equipment, while only a technically gifted person could modify equipment to work on quiet non-amateur frequencies, which is where future "real" amateurs may migrate to avoid QRM levels and find human contact.

## HOW TO REVERSE THE TREND?

Authorities should copy the Shining Example of the Thai authorities with regard to import, sale and installation of HF radio equipment

Radio amateurs should form national unions by passing the national societies and leaving those to cater for button pushing and CB

Radio amateurs should seek ways to engage organisations, form clubs, and involve socially excluded and disadvantaged teaching CW

Concentration camps for the aged should be advocated with "care and quality of life" argument to allow internees to erect antennas

SOTA type activities should be encouraged and promoted so the public can see simple equipment, keys, fun

and fitness benefits  
CW and home brew as the "heart and soul" of amateur radio and "wow factor" of stand-alone independent communications promoted  
Concerted, coordinated and assisted action on reducing noise levels on HF frequencies, use funds from punitive fines on import violation  
Pressure contest committees to write into the rules of contest, if not accurate reports, to restrict contest frequency use,  
E.g. CQ WW CW Contest can stipulate 14010-14059, 14110-14150 for use in the CW contest, avoiding DX slot and chat-QSO/digi slots  
REAL DX NEWS and REAL DXCC AWARD be started to highlight and publicise long-term resident and honest-report DX not DX Tourism  
Allow more antennas, if Japan, Thailand can allow high towers in residential areas, Australia: Quality of Life Health not nanny state  
Allow higher power when conditions demand it, VK contest & F stations run 1kW illegally, allow legal running of 1kW if no QRM caused  
Work on removing OM fear of XYL threat with tact "My dear, would you prefer me down the pub drinking, or in the shack at the radio?"  
Reviving Club activities to also involve families, youth, and not just technical talks, lectures but hands-on fun operating and constructing  
A campaign on software writers to accurately label DCW as DCW and not CW on their digital mode products and software  
Working to create an \*inexpensive\* home brew VFO tx/rx with 5W power out from 13V tri band 40/30/20m rig to fill a current void  
Worry less about a little chirp and drift and more about human activity, bring back a little chirp and drift into the CW bands  
Contact the many radio amateurs who gave up in disgust at the state of the hobby, and engage them in a revival of real amateur radio  
Revive the fall-back fail-safe communications capability of amateur radio stations with activities and training in disaster communication  
Form proper Amateur Radio Unions to handle the self-management aspects of amateur radio and licensing and reverse negative trends  
Bring young and old, rich and poor, isolated and connected, together in activities that engage positively in a unique and versatile hobby

### **3. Radar Iran now on 28500 kHz**

The Iranian radar was transmitting on 28500 kHz on FMOP with 225 and 334 sps covering about 36 kHz with many spurious emissions.

### **4. 7195 kHz – BC clandestine (probably Tinian)**

The BC transmitter on 7195 is a clandestine radio operated by Radio Free Asia, as we have been reported. K1ZZ, Dave, promised to take action and look for a solution.

### **5. Moroccan MIL traffic on 21000 kHz**

We found Moroccan MIL traffic on USB on 21000 kHz on Dec. 14<sup>th</sup>. Codan-beeps were audible.

### **6. 5 MHz – new band and fisherman's darling**

A small part (15 kHz – 5351.5 - 5366.5 kHz) has been assigned on secondary base in Germany.  
I was rather astonished to find Moroccan fishermen on 5353.0 kHz on USB on Dec. 21<sup>st</sup> at 1635 UTC.

### **7. No changes or bad news**

3590.0 kHz – USB – Spanish fishery with voice scrambler "CRY 2001" often in the evenings  
6998.0 kHz - Russian buzzer – daily and all day  
7120.0 kHz – Radio Hargaysa Somalia  
7146.5 kHz – Radio Eritrea with Ethiopian QRM  
7175.0 kHz - Radio Eritrea with Ethiopian QRM  
7180.0 kHz - Radio Eritrea with Ethiopian QRM  
7185.0 kHz – Radio Eritrea with Ethiopian QRM  
7200.0 kHz – Radio Myanmar  
14295.0 kHz - Radio Tajik (harmonic from 4765 kHz)

### ARSK MONITORING OVERVIEW FOR December 2016

Radio Hargeisha remained on 7,120 kHz with broadcasts and what is apparently the Voice of the Broad Masses, Eritrea, on 7,145 and 7,175 kHz. There are several persistent unidentified nets on 40 meters, apparently in east or central Africa.

E.H.M. Alleyne, 5Z4NU - ARSK National IARUMS Co-ordinator

#### ARSK – Kenya – 5Z4NU (Ted)

### IRTS – Ireland – EI3GYB (Michael)

<b>SOC</b>	<b>kHz</b>	<b>UTC</b>	<b>DD</b>	<b>MM</b>	<b>ITU</b>	<b>IDENT</b>	<b>MODE</b>	<b>DETAILS</b>		
IRTS	1841	1736 to 1757	03	12	HOL or MM		USB	Group of 3 male Dutch fishermen. Motor noise and VHF traffic in the background of one of them. Discussing weight of fish. Loud and clear audio from all of them.		
IRTS	1896.5	0900	12	12	DL		PSK8	DL navy. Every day all day and night now with winter propagation. Frequencies from 1895.5 to about 1901 KHz not usable.		
IRTS	3535	1334	06	12	F or MM		USB	2 male French fishermen. Weak signals.		
IRTS	3560	1832	16	12	E or MM		USB	2 male Spanish fishermen just ending QSO. Very strong signals from both sides. Scottish fishermen. Loud and good audio. Motor noise in the background.		
IRTS	3565	1835	13	12	RUS or UKR		USB	Male voice in Russian. Calling someone, getting no answer. Probably military.		
IRTS	3615	1805	19	12	UKR		LSB	Plenty of Russian speaking persons, all shouting anti- Russian slogans. Revolutionary music. "Kill Putin!"		
IRTS	3696	1833	15	12	E or MM		USB	2 male Spanish fishermen. Both very strong signals. One is called Jose. They stopped transmitting 2 minutes after I started calling CQ.		
IRTS	3756	1915	04	12	RUS			"The Pip"- every day during all hours of darkness. Running now for 20 years or so non-stop.		
IRTS	4717	1848 to 1853	03	12	POR or MM		USB	2 Portuguese fishermen. Bad audio from one of them. Signals itself very strong. One of them gets a phone call- you hear the phone ringing in the background. Conversation stops at that moment. Note- not a HAM frequency- just for info.		
IRTS	4999	0925	03	12	E or MM		USB	Spanish Fishermen just ending QSO. Frequency is not a HAM frequency- just for info.		
IRTS	5362	2030	31	12			USB	2 male Arab voices.		
IRTS	5400	1245 to 1300	28	12	POR or MM		USB	2 male Portuguese fishermen.		
IRTS	5403	0330	24	12			USB	Male voice calling in Spanish "Citon de Pascal-tu me recibes ? ". Calling every 10 minutes or so from 0330 to 0410.		

SOC	kHz	UTC	DD	MM	ITU	IDENT	MODE	DETAILS
IRTS	5405	0240 to 0300	23	12			USB	2 male Arab voices, non- stop chat from 0240 to 0300. Back again from 0445 to 0455z. Not Maghreb accent. "Al'umam almuttahida" ( United Nations) mentioned several times.
IRTS	6238	1213	03	12	E or MM		USB	2 French fishermen, very good signals. Motor noise in background. Having a great chat with a lot of laughter. Non HAM frequency- just for info.
IRTS	7000	1950	07	12	RUS		AM	Buzzer, very strong.
IRTS	7050	1340	06	12	RUS/ UKR		LSB	Ukrainian Russian propaganda war with revolutionary music and a lot of shouting. On most days until 2200 z or so.
IRTS	7055	1433-2155	06	12	RUS/ UKR		LSB	Ukrainian-Russian propaganda war with plenty of music and shouting from both sides. Most days until late in the evening.
IRTS	7050.5	0356	09	12	E or MM		USB	Spanish fishermen. Very strong. "¡Hasta mañana!"
IRTS	7080	0340	19	12	RUS		USB	2 male voices reporting positions in Russian.
IRTS	7120	0351	09	12	SOM		AM	Radio Hargaysa. Strong signal. Every day, night and afternoon.
IRTS	7121.8	1850	10	12	INS or MM		USB	2 male Indonesian fishermen.
IRTS	7137	0039	10	12				Strong radar from 7137 to 7159 KHz. All frequencies unusable.
IRTS	7146.5	1830	10	12	ERI		AM	Radio Eritrea. Very strong. NX and NA with s/off at 1834z.
IRTS	7175	1831	10	12	ERI		AM	Radio Eritrea. Strong. S/off at 1833z
IRTS	7200	1230	02	12	Taiwan		AM	Voice of Free China, Taiwan. Every day all morning until s/off at 1300z. Big signal.
IRTS	7205	2124	11	12	F		AM	RFI, splattering down as far as 7190 KHz.
IRTS	10123	1925	10	12	KOR or MM		USB	2 male Korean fishermen. Good signal.
IRTS	10129	1602	06	12			USB	2 male voices with Arab containing a lot of French words. Probably Moroccan fishermen.
IRTS	10131	1832	19	12				Very strong radar from 10131 to 10155 KHz.
IRTS	10133	1140	31	12			USB	2 male Arab voices. Lively discussion. Maghreb accent. Still going strong an hour later.
IRTS	10133.3	0938 to 0955	03	12				2 Arab male voices, Maghreb accent
IRTS	10147	2000	07	12				Strong Radar from 10147 to 10170 KHz.
IRTS	10151.2	0951	14	12			USB	2 Maghreb fishermen. Bleeding down as far as 10148.7 KHz.
IRTS	14192	1216	05	12	RUS		F1B	RUS navy Kaliningrad. Every day, very strong during daylight hours.
IRTS	14295	1127	08	12	TJK		AM	Radio Tajikistan, 3 <sup>rd</sup> harmonic. Nearly every day audible .
IRTS	14345	1353	04	12			Digi	Weak digital signals
IRTS	18162	0843	03	12				Radar from 18162 to 18185 KHz. Persistent and strong.
IRTS	21297	1320	25	12				Radar from 21297 to 21320 KHz.
